

The quick solution for a poor fitting device.

Whether you have a carbon fiber socket or an AFO orthosis,
RevoSurface® will make your device fit and function better.

What is RevoSurface?

RevoSurface is a kit that your provider can retrofit onto your existing prosthetic or orthotic device to deliver all day adjustability.

Why use it?

- Your rigid device is just not fitting properly
- RevoSurface can add longevity by making devices last longer and fit better
- You have a thermoplastic device and you want to make it adjustable
- Improve your current brace by eliminating the hassles of Velcro®
- Easily dial in the fit of your device with one hand

Who should use it?

We have tested adjustable socket designs on adults, teenagers, top athletes, stay-at-home moms, professionals, outdoorsmen, and veterans. Whether you are an arm, a leg, or a joint disarticulation patient, adjustable devices can increase your comfort and control. We do not recommend RevoSurface as a solution to footwear fit and for those with neuropathy.

How does it work?

With a simple twist forward and backward of the Click® Reel, you control the micro/macro fit of your device when and where you want. It's that easy!

Check the list of providers on our website to see if your practitioner offers **RevoSurface**.
